

NELSON RAMOS

Computer Science Engineer | Fullstack Software Developer

+56985917608 | nelsonalejandroramosrivera@gmail.com | www.nelsonramos.cl

Professional Profile

Result-oriented Computer Science Engineer with over 5 years of experience developing, scaling, and optimizing robust software solutions using microservices architectures and REST APIs. Expert in the JavaScript ecosystem (NestJS, Angular, Vue 3) and Java (Spring Boot, Spring Batch), with a strong technical background in integrating critical payment gateways, modernizing legacy systems, and implementing AI-driven automations. Adept at applying SOLID principles, agile methodologies (Scrum), and DevOps practices to accelerate delivery cycles and optimize platform engineering performance.

Work Experience

Fullstack Developer | SONDA

August 2026 – Present

- Backend technical lead responsible for the architecture and development of the payment reconciliation engine for the BUPA project, built in Python using the FastAPI framework, ensuring high performance and efficient transaction processing.
- **Key Achievement:** Designed and implemented the core architecture of the payment reconciliation engine for BUPA, optimizing transactional processing times and ensuring high availability and precision in massive financial data matching.

Software Consultant (Subtel Project) | Entelgy

November 2025 – December 2025

- Spearheaded and executed the migration of critical legacy systems (both Backend and Frontend) to Java Spring Boot for the Undersecretary of Telecommunications (Subtel).
- Authored comprehensive, advanced technical documentation under rigorous institutional compliance, securing high traceability, security, and reducing future maintenance overhead.
- **Key Achievement:** Optimized service reliability and modular design for public systems, eliminating security gaps and achieving a production deployment with zero downtime.

Full Stack Developer | Junngla SPA

June 2023 – June 2025

- Integrated and synchronized high-volume payment processing systems and e-commerce

platforms using RedPay, Blix systems, and Keycloak SSO via custom Java plugin development.

- Engineered robust microservices with NestJS (REST API) and developed custom Python modules in Odoo v18, embedding Artificial Intelligence algorithms to automate data processing workflows and image processing.
- Architected highly responsive, scalable user interfaces utilizing Vue 3 and Material Design (Vuetify), significantly boosting user experience (UX) and client-side rendering speed.
- **Key Achievement:** Successfully implemented a multi-tenant framework across payment systems and integrated external e-commerce ecosystems available in the market.

System Engineer | Indra

March 2022 – October 2022

- Constructed scalable enterprise-grade Backend APIs using Java Spring Boot and orchestrated efficient data query interactions with heavy database stored procedures.
- Automated massive data workloads by designing and implementing structured ETL (Extract, Transform, Load) flows using the Java Spring Batch framework.
- Developed reusable Frontend components in Angular and managed end-to-end continuous integration and deployment pipelines (CI/CD) under Scrum methodology.
- **Key Achievement:** Maintained environment consistency across development, QA, and production, promoting documentation standards and tracking modular component deployments.

Software Developer | Fusionsa

October 2019 – March 2020

- Designed and deployed highly performant REST APIs using the Hapi framework to handle core data transactions for the Gasconnect application.
- Executed the strategic migration of critical modules to Angular 9 and designed high-availability MongoDB database architectures utilizing replica sets.
- **Key Achievement:** Ensured business operational continuity and seamless fault tolerance by refactoring and restructuring the NoSQL replica database layer.

Software Developer | Bolsa de Santiago

April 2019 – October 2019

- Built automation workflows and robotic web scraping mechanisms for automated browser navigation and dynamic HTML-to-PDF code conversion using Puppeteer and AngularJS.
- **Key Achievement:** Automated official financial statement generation, eliminating human formatting errors and accelerating key document distribution to market operators.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, Java, Python, HTML5, CSS3.

- **Frameworks / Libraries:** NestJS, Spring Boot, Spring Batch, Angular, Vue 3, Express, Hapi, Vuetify.
- **Databases:** PostgreSQL, MongoDB, MySQL (MariaDB), MS SQL, JPA / Hibernate persistence.
- **Tools / DevOps:** Git, GitHub, GitLab, CI/CD, Docker, Scrum, Postman, DBeaver, IntelliJ IDEA, VS Code, OpenCode, ollama, other AI tools.

Education

- **B.S. in Computer Science Engineering** | Universidad Santo Tomás (2012 – 2015)
- **IT Platforms Technician Degree** | Universidad Santo Tomás (2009 – 2013)
- **Telecommunications Technician Degree** | Liceo Juan Piamarta (2007 – 2009)

Training & Certifications

- **Specialization in Artificial Intelligence & Automation:** Continuous project-based learning and advanced skill development focused on the design of RAG Systems (Retrieval-Augmented Generation), autonomous AI agent orchestration, and advanced workflow automation and integrations via n8n.
- Committed to continuous learning and technical mastery: ongoing specializations and upskilling through Platzi, Google, Udemy, Telefónica, HackerRank, and LinkedIn Learning.
